Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-3, drawn to a process of making hollow polyester filaments, classified in class 264, subclass 103.

II. Claim 4, drawn to hollow polyester filaments, classified in class 428, subclass 398.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the process as claimed can be used to make another and materially different product such as hollow polyester filaments having a denier per filament of 0.3 to 2.5. The product as claimed can be made by another and materially different process such as a process wherein the tow is not passed through a delay shroud, or a process in which the tow is wound at a speed of 500 meters per minute.

Art Unit: 1732

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification; restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
